

working title

A cozy, menu-driven creature collector — about **studying a strange little world**, one biome at a time. No overworld to walk. Just travel, explore, and fill the guide.

MENU-FIRST

PICK UP & PUT DOWN

LEAN TO BUILD

Cut the wandering. Keep the wonder.

A.

Menu-first, no overworld

Everything is navigation, lists and cards. Players get straight to deciding and doing — not steering an avatar around.

B.

Pick up & put down

A loop you can dip into for two minutes or forty. Tidy save points everywhere; nothing punishes a short session.

C.

Lean & scalable

New regions and creatures are mostly data, not bespoke levels. Plays to a software team's strengths.

D.

A studious spin

Less brawling, more observing. You're a field researcher reading clues to find and understand creatures.

Four taps and you're collecting.

STEP 1

Choose a region

Travel from a world menu — each region is a new set of biomes.

STEP 2

Visit the town

Take quests, advance the story, gear up at the shop.

STEP 3

Explore a biome

Search and study to surface creatures; the right gear unlocks more.

STEP 4

Collect & return

Bank creatures, gear and progress — then pick the next region.

↺ Loops back to the world menu — and every step is a clean stopping point. Play in two minutes or two hours.

The world is a menu.

Wireframe — pick a region, see its biomes, travel in one tap.

Tidal Marsh · nocturnal · uncommon

STUDY · 3 of 4 notes

"Glows faintly at night to lure insects. Skittish near light — best observed with the lantern off."

Each fully-studied entry unlocks lore + bonus rewards.

Small to build. Easy to grow. Easy to love.

CONTENT = DATA

Scales without a big pipeline

Regions, biomes, creatures and gear are entries in tables — not hand-built levels. Adding content is our wheelhouse.

FITS REAL LIFE

Sessions in minutes, not hours

Every step is a clean save point, so the game fits commutes, breaks and busy weeks.

A FRESH ANGLE

Study, not just battle

A logical, researcher's take on a fantastical world — a real point of difference in the genre.

► **NEXT** Prototype the loop: 1 region · 3 biomes · ~12 creatures — then pressure-test whether menu-driven exploration **feels** good.
